²Department of Political Science, University of Oslo

May 29, 2019

These appendices contain additional information about the Historical Regimes Data (HRD) and some additional analyses not reported in the paper. More specifically, Appendix A lists all country-polity observations included in HRD as well as the wording of all the questions that were coded. Appendix B provides an overview of the data collection process and the division of labor within the team. Appendix C exemplifies the coding by presenting timelines as well as coding notes for a selected number of countries. Appendix D clarifies the use of the interregnum period coding in HRD.

The following appendices discuss key heuristics devised for the coding. Appendix E lists a number of events that are commonly used to identify candidates for regime breakdown as well as the thresholds applied for coding regime change and not for these events. Appendix F brings up, and specifies, the discussion of what to count as a “substantial change” to both formal and informal rules for leadership selection and maintenance, and goes through the key rules-of-thumb for determining this for the different regime end type categories. Appendix G clarifies and illustrates the considerations made when distinguishing between the three regime change categories that pertain to directed transitions or self-coups. Appendix H clarifies how the units (polities and their time series) are defined, and goes through different scenarios of regime change coding when polities merge or split up, including cases of decolonization.

Appendix I briefly illustrates results from a Bayesian change point model exercise, similar to that presented in the paper for all regime breakdowns, focusing only on regime breakdowns due to popular uprisings or only on regime breakdowns due to coups. Finally, Appendix J contains tables and additional discussions pertaining to robustness tests that are mentioned briefly in the paper, including regressions using different GDP and population data as well as regressions run on sub-samples of, respectively, democratic and autocratic regimes.

A Questions and observations included in HRD

This appendix first lists the questions coded in HRD. Table A-1 at the end provides an overview of the polity-years included in the dataset. While HRD takes the definitions of country-units and time series from (Historical) V-Dem as its point of departure, please note that regimes that came to power before the start of the V-Dem time series, but controlled power at the first day of these time series, are also coded all the way back to the date the regime started.

Regime interregnum (*v3regint*)

Question: Does there exist an identifiable political regime?

Clarification: This question is used to identify so-called interregnum periods, where no political regime is in control over the entity. Different types of political situations can lead to periods of time under which there is no identifiable political regime, one example being a civil war in which none of the parties have clear control over political bodies and processes in the country. However, the interregnum coding is employed conservatively, meaning that partial control over political bodies and processes in fairly large parts of the country (which is often the case also during civil wars) is sufficient for a 0 score.

0. Yes

1. No

Regime name (*v3regname*)

Question: What is the name of this regime?

Clarification: If the regime is commonly referred to with a particular name in the international literature, such as “The Second French Republic”, then this name should be used. The exception to this rule is if the regime is only referred to by the name of the nation (e.g. “North Korean regime”). If multiple names are used interchangeably in the literature, select one of them. If there is no common name, try to provide a name that would be informative to scholars that have knowledge of the political history of the relevant country. If the time period in question is characterized by a so-called interregnum period, where no political regime is coded, please provide the name “Interregnum X-Y”, where X denotes the country and Y denotes the order (in time) of this interregnum period among all such periods (within the coded time series) for this particular country. E.g., the first coded interregnum period of Spain should be coded “Interregnum Spain-1”.

Answer type: Text

Regime start date (*v3regstartdate*)

Question: When did the political regime obtain power?

Answer type: Day/Month/Year

Regime end date (*v3regenddate*)

Question: When did the political regime lose power?

Answer type: Day/Month/Year

Regime end type (*v3regendtype*)

Question: Could you specify the types of processes (one or more) that led to the end of the regime?

0. A military coup d'état.
1. A coup d'état conducted by other groups than the military.
2. A self-coup (*autogolpe*) conducted by the sitting leader.
3. Assassination of the sitting leader (but not related to a coup d'état)
4. Natural death of the sitting leader
5. Loss in civil war.
6. Loss in inter-state war.
7. Foreign intervention (other than loss in inter-state war)
8. Popular uprising.
9. Substantial political liberalization/democratization with some form of guidance by sitting regime leaders
10. Other type of directed and intentional transformational process of the regime under the guidance of sitting regime leaders (excluding political liberalization)
11. Substantial political liberalization/democratization without guidance by sitting regime leaders, occurring from some other process (such as an unexpected election loss for the sitting regime) than those specified by categories 1 to 10
12. Other process than those specified by categories 0 to 11.
13. Regime still exists

Answer type: Single selection

Regime end type, multiple selection (*v3regendtypems*)

Question: Could you specify the type of process that you consider the most important in leading to the end of the regime?

0. A military coup d'état.
1. A coup d'état conducted by other groups than the military.
2. A self-coup (*autogolpe*) conducted by the sitting leader.
3. Assassination of the sitting leader (but not related to a coup d'état)
4. Natural death of the sitting leader
5. Loss in civil war.
6. Loss in inter-state war.
7. Foreign intervention (other than loss in inter-state war)
8. Popular uprising.
9. Substantial political liberalization/democratization with some form of guidance by sitting regime leaders
10. Other type of directed and intentional transformational process of the regime under the guidance of sitting regime leaders (excluding political liberalization)
11. Substantial political liberalization/democratization without guidance by sitting regime leaders, occurring from some other process (such as an unexpected election loss for the sitting regime) than those specified by categories 1 to 10
12. Other process than those specified by categories 0 to 11.
13. Regime still exists

Answer type: Multiple selection

Table A-1: Observations included in HRD

B An overview of the data collection process

Several scholars (from the Historical V-Dem team) were involved in the deliberation and revision of the questions and definitions employed for the Historical Regime Data (HRD), after they had been originally formulated by the second author of this article. The broader operational criteria guiding the data collection were intentionally designed to reflect the conceptual regime definition discussed in the paper. To recapitulate, a regime is defined according to the formal or informal rules for the selection and maintenance of political leaders in power.

Regarding the actual data collection, the second and third authors started by producing first drafts of the more specific coding guidelines and lists of operational criteria for the coding. They thereafter trial-coded a subset of eight (quite diverse) countries. They thereafter revised the coding scheme based on observations made during the trial coding, and recruited and coordinated the RAs' coding in a hands-on manner early on (another round of specifications of the operational criteria was conducted while and after the three RAs that were first recruited had completed their first batches of countries).

In the end, the first author of the article – originally one of the three first recruited RAs – conducted the main bulk of the coding, which lasted for about two years in total. The observations coded by the first author includes all coding for 1920–2016 for all polities (except for double-coding related to inter-coder reliability tests), in addition to a substantial part of the historical coding. She also trained additional RA coders and quality-controlled the coding of the other coders to enhance internal consistency, before “hard decisions” were passed on to the second and third author of the article. One important strategy in this regard was the explicit instruction given to all RAs that they should provide alternative codings, with full documentation for all alternative solutions, whenever in doubt on how to delineate the regime units. Typically, this would entail a more “liberal” coding, with one or more regime changes throughout a given time interval, as well as a more “conservative” coding where the entire time interval was covered by one regime. At the end of the historical coding and then again at the end of the coding for 1920–2016, the second and third authors would separately read through all these “liberal”/“conservative” codings, identify and read through additional source material if needed. The two authors would then make suggestions for decisions to these cases, with a particular focus on applying the rules so that cross-time and cross-country consistency was ensured, and meet for deliberations. In the very few cases where the two authors were unable to land on a joint decision, they would bring in the relevant RA for discussions and, if needed, ask the RA to go back to/identify more sources before

settling the issue. More generally, internal consistency was also enhanced by continuous discussions between the authors and the RAs (and between the RAs), especially on how to settle dates, types of breakdown, and delineating regimes for tricky cases.

Among the RA coders, other than the first author, four focused on their respective batches of countries for the 1789–1920 period, with, e.g., one (Italian) RA coding Italian pre-unification states and one (German) RA coding German pre-unification states. All coders have drawn on several sources – mainly country-specific sources in the form of monographs written by historians or political scientists, research articles, or encyclopedias, but also cross-country sources such as the existing regime datasets listed in the article – to inform their coding decisions.

The sixth RA double-coded six selected countries from Latin America across the 20th and 21st centuries – mainly countries that we presumed to be especially hard cases – for consistency/reliability checks. For these six countries (Bolivia, Costa Rica, Mexico, Uruguay, Venezuela and Nicaragua), the double-coder identified the exact regime end dates and end types recorded by the original coder for 75 percent of the originally coded regimes (39/52). For another 10 percent (5 regimes), the double-coder identified the regime change dates identified by the original coder, but coded the end type differently. For the especially difficult case of Bolivia, 16 of the original coder’s total of 22 regimes since the turn of the 20th century were exactly identified by the double-coder. As noted in the paper, the second coder, for instance, failed to identify two coups in the 1930s that the original coder had identified from one particular source (Hudson and Hanratty, 1991, 28-32). The first was the regime change following the military command’s overthrow of president Salamanca during the Chaco War with Paraguay, leading to the instalment of his peace-seeking vice president. The second regime begins when a group of army officers decided to back the coup led by Col. Busch to overthrow president Toro in 1937, citing Toro’s unwillingness to challenge the tin oligarchy as his main reason. For the more straightforward case of Costa Rica, however, the fifth coder identified the exact same four regimes as the original coder.

C Examples of regime coding and coding notes

In the paper, we provided an illustrative timeline of the coding of regime start- and end dates for Iran from 1925 onwards. Figure A-1 provides several other examples, covering the entire time series of the countries in question. At the same time, the timelines report *how* the various regimes ended. Specifically, we present time lines for Serbia, China, Mexico, France and Russia, with each regime death as recorded for the v3regendtype variable.

We then present tables with excerpts of the regime coding sheet for the set of countries in Figure A-1. These excerpts provide a brief historical exposition and justification for, for example, the coding of regime end dates of each regime. The full set of notes for all variables for each country can be found at ANONYMIZED WEBPAGE.

Note: x = Coding gap. 0 = A military coup d'etat. 1 = A coup d'etat conducted by other groups than the military. 2 = A self-coup (autogolpe).
 3 = Assassination of the sitting leader. 4 = Natural death of the sitting leader. 5 = Loss in civil war 6 = Loss in inter-state war.
 7 = Foreign intervention. 8 = Popular uprising. 9 = Substantial political liberalization with guidance by sitting regime.
 10 = Other type of directed transition with guidance of sitting regime. 11 = Substantial political liberalization without guidance by sitting regime. 12 = Other process.

Mexico	3	Constitution of 1824/Governments of Santa Anna, Farias, Salas, Anaya	22/08/1846	0	15/09/1847	The Mexican War ends in victory for the United States. On the evening of 15 September, after days of heavy battles in and around Mexico City, their flag flutters over the national palace, and Santa Anna resigns the presidency.	6, 7	6	Loss in interstate war	Vzquez (2000: 362-367); Bazant (1977: 56-57); Meyer and Sherman (1995: 350-351)
Mexico	3	United States occupation	15/09/1847	0	30/05/1848	On 30 May Mexico and the United States exchange ratified copies of the treaty. Presidential elections favor Jos Herrera, who by the middle of June re-instates the government in Mexico City when U.S. forces leave.	10	10	Both the Mexican and the U.S. Congress ratify the treaty of Guadalupe Hidalgo ending the occupation. Intended transformational process by the U.S. occupying power?	Meyer and Sherman (1995: 351); Vzquez (2000: 366-369)
Mexico	3	Constitution of 1824/Governments of Jos Herrera, Mariano Arista	30/05/1848	0	20/04/1853	In the aftermath of the Mexican War, Congress consists of two political factions, the liberals and the conservatives. The Liberals stay in power until 1853. The years from 1848 until 1853 are marked by a fragile peacefulness where the parties' points of view are debated in public forum. But renewed strife is catalyzed by a military coup led by conservatives installing Santa Anna back in the executive.	1, 0	1	Considered a coup by the conservatives and their junta supporters inviting back Santa Anna as president.	Bazant (1977: 60)
Mexico	3	Rule of Antonio Lopez de Santa Anna	20/04/1853	0	09/08/1855	The Gadsden purchase, where Santa Anna sells the last bit of land needed to round off the U.S. territorial acquisition of 1848, is a step too far for Juan Alvarez who launches a liberal popular revolt endorsed by many segments of society, including the peasants. In August Santa Anna tenders his resignation and goes into exile.	0, 1, 8	8	The revolution of Ayutla enjoys a wider base of support than most previous antigovernment movements. Many rebellions take place around the country. Could be considered popular uprising.	Vanderwood (2010: 371-373); Meyer and Sherman 1995: 373-376); Bazant (1977: 61)

Country name	V-Dem code	Regime name	v3regstartdate		v3regenddate	Notes to v3regenddate	v3regend-typeMS	v3regend-type	Notes to v3regendtype	Sources
Mexico	3	Liberal interim governments of Jun lvarez and Ignacio Comonfort	09/08/1855	0	05/02/1857	The new constitution is promulgated in February 1857. The constitution provides for the abolition of clerical and military immunities, basic human rights, protected private property, equality before the law, freedom of speech, and the preservation of federalist system with its power in unicameral national legislature.	9	9	Considered substantial political liberalization.	Meyer and Sherman (1995: 379-380); Bazant (1977: 72-73)
Mexico	3	The Constitution of 1857	05/02/1857	0	15/12/1857	The liberals soon find the implementation of the constitution going very slow. In December, the sitting president Comonfort allies himself with a conservative general, Flix Zuloaga, in a military coup.	0, 2	2	A self-coup accompanied by the military.	Vanderwood (2010)
Mexico	3	Comonfort presidency	15/12/1857	1	11/01/1858	Within a month Comonfort becomes disenchanted with his new conservative partners. General Zuloaga decides, with clerical and military support, to oust Comonfort and assume the presidency for himself. Meanwhile, the liberals rally under Benito Jurez, Supreme Court leader and constitutionally next in line for the presidency.	0	0	A military leader, Zuloaga seeks to defend the country against "the anarchy he sees being unleashed by liberalism" and overthrows Comonfort.	Vanderwood (2010); Meyer and Sherman (1995: 381-282)
Mexico	3	Conservative regime under Flix Zuloaga and Miguel Miramón	11/01/1858	0	01/01/1861	The liberals eventually succeed in establishing a capital in Veracruz. For the first two years they are barely able to hold their guard against a well-equipped conservative army. By 1860 the tide turns, and on New Year's Day, Jurez and the liberals enter Mexico City.	5	5	Conservatives loose in civil war.	Meyer and Sherman (1995: 381-384); Vanderwood (2010)
Mexico	3	Constitution of 1857/Government of Benito Jurez	01/01/1861	0	10/07/1863	It takes two efforts before the French siege Mexico City in June 1863. On May 31, Jurez evacuates with his army for San Luis Potosi.	7	7	Considered foreign intervention by French troops.	Meyer and Sherman (1995: 388-391); Vanderwood (2010); Hamnett (1999: 167-168)

Country name	V-Dem code	Regime name	v3regstartdate		v3regenddate	Notes to v3regenddate	v3regend-typeMS	v3regend-type	Notes to v3regendtype	Sources
Mexico	3	French occupation/ Assembly of Notables/ Regency of Juan Almonte, Jos Mariano Salas and Pelagio Labastida	10/07/1863	0	10/06/1864	The French secure central Mexico. In October a delegation of Mexican conservatives visits Maximilian, Napoleon's choice for the throne, and offer him the crown on behalf of the Assembly. On 10 June Maximilian arrives in Mexico.	10	10	Intended transformational process by the sitting regime. Napoleon III signs the Convention of Miramar agreeing on the relationship between Napoleon and Maximilian.	Meyer and Sherman (1995: 391-393); Vanderwood (2010)
Mexico	3	French occupation/ Rule of Emperor Maximilian I	10/06/1864	0	15/07/1867	Several factors, including threats from the United States who openly support Jurez, lead to the withdrawal of French troops in 1866 and 1867. The liberal Juaristas under Generals Mariano Escobedo and Porfirio Diaz begin to put pressure on the Emperor. Maximilian surrenders after being surrounded by the liberal army on 15 May.	8	8	Considered a republican uprising against an unpopular foreign emperor.	Meyer and Sherman (1995: 397-399); Vanderwood (2010)
Mexico	3	Constitution of 1857/ Government of Benito Jurez/ Government of Lerdo de Tejada	15/07/1867	0	21/11/1876	Congress re-elects Jurez for a fourth term. But the Constitution is not put aside for other reasons than this. Diaz does not accept the decision and revolts, but the matter is settled when Jurez dies of illness. It seems that Diaz revolts entirely on the principle of re-election. He accepts the following defeat in the elections after Jurez death. The winner Lerdo de Tejada follows the same policies formulated by Jurez. In March 1876, Diaz launches his Revolution of Tuxtepec tired of presidents seeking re-election. He captures Mexico City 21 November 1876.	1	1	Hamnett (1999) leaves it an open question whether the period of the Restored Republic (1867-1876) is marked by a constitutionalism or personal rule. A coup d'état, with soldiers in a number of states flocking to Diaz "effective suffrage" banner raises Porfirio Diaz to the presidency.	Vanderwood (2010); Meyer and Sherman (1995: 409-414); Hamnett (1999: 180, 196)

Country name	V-Dem code	Regime name	v3regstartdate		v3regenddate	Notes to v3regenddate	v3regend-typeMS	v3regend-type	Notes to v3regendtype	Sources
Mexico	3	Constitution of 1857/ Governments of Porfirio Diaz and Manuel Gonzalez	21/11/1876	0	01/12/1884	Gonzlez is elected with a large majority, mainly due to Diaz' popularity. Diaz hands over power peacefully knowing that he could serve again after the intervening term of Gonzalez. Some argue that Diaz throws his support behind Gonzalez because he does not trust other candidates handing back power to him if he wins the 1884 elections (Hamnett 1999: 197). Others reject the portrayal of Gonzalez as a puppet of Diaz and argue that Diaz' dictatorial aspirations begins with his second term. (Meyer and Sherman 1995: 436-437; Coerver 1979). It seems that Diaz plays the political game well, using his four years out of office to build a new political machine to win the upcoming elections. In September 1884 he sweeps back to victory.	2, 10	2	Totally contrary to his principles, Diaz makes sure that he is able to run for president indefinitely. Diaz effectively initiates an autogolpe. He convinces both congress and his personal clients that strong man rule is necessary for political stability and economic development. His inner circle supervise official newspapers and marginalizes opposition. A further amendment to the constitution removes the specification for one reelection making it possible to run indefinitely.	Meyer and Sherman 1995: 436-438); Hamnett (1999: 196-200, 204)
Mexico	3	Regime of Porfirio Diaz	01/12/1884	0	25/05/1911	Madero's victory over federal troops in Ciudad Jurez in April and the eruption of rebellion across the country, leads Diaz to sign a peace treaty and hand over power to Madero. Diaz signs his resignations 25 May.	8	8	Considered popular uprising against the increasingly suppressive Diaz regime.	Meyer and Sherman (1995: 438, 502-505); Hart (2002: 438-439)
Mexico	3	Interim Government of Lon de la Barra	25/05/1911	0	05/11/1911	Francisco Madero is opposed only by minor candidates and wins the elections. He is installed 5 November.	10	10	Considered intended transformational process in which an interim government hands over power to an elected one. Elections are not based on extensive suffrage.	Hart (2002: 439); Meyer and Sherman (1995: 506-509)

D A note on the coding of interregnum

HRD includes a dichotomous variable to capture interregnum periods (*v3interreg*), as listed in Appendix A. In HRD, interregnum is not coded as a way of “filling in” for complicated gradual changes (in contrast to the widely used Polity2 measure from Marshall, Gurr and Jagers, 2013), such as the case of early-1920s Italy discussed in the paper. Rather an interregnum period is coded for situations where no governing elite or body is in place to effectively control/determines policies in major parts of the Polity.

One example is the three month-period that followed in Wallachia (now Romania) in 1848 after a group of revolutionaries forced the sitting Prince Bibescu to support the revolutionary program and name a provisional government. Two days later, the Prince abdicated because of increasing threats, and the Russian consul, responsible for the then-operating Russian Protectorate of Wallachia, left Bucharest. During the following three months, no attempt at consolidating rule was successful (Oetea, 1970; Treptow, 1996). The interregnum period of Wallachia ended when the Ottoman Porte invaded on September 25th 1848.

Another example is the two year-civil war that ravaged Egypt between 1803 and 1805. After Ottoman occupation in March 1803, Albanian forces under Tahir Pasha assumed government in May. When Pasha was assassinated in June that year, however, the area spiraled into civil war. When power was eventually consolidated, the subsequent regime of Mohammed Ali lasted for a total of 61 years.

Our coders were instructed to be conservative with applying the interregnum coding. One key note in this regard is that the common denominator for most interregnum periods is civil war. However, we also note that there are numerous instances of civil war where the country is still assigned a regime (i.e., scored as 0 on the interregnum dummy), for example territorial civil wars located in particular regions in the periphery but where a government still clearly controls power for most of the territory.

E Common types of events that are candidates for regime change

Table A-4 gives an overview of the kinds of events that trigger regime change codings in HRD. For each type of event, we also give a very short description of how we delineate the threshold for whether or not a regime breakdown is coded. First and foremost, the latter thresholds describe when events are deemed to introduce a *substantial* change to the formal or informal rules that determine how leaders are selected and maintained (and, as such, clarifies the operational boundaries of our definition of regime change). Because of the empirical complexity of the different cases, and our aim to be flexible when coding each individual case, this list is far from exhaustive.¹ However, the list displays the most common rules-of-thumb applied consistently in the coding.

¹If a case does not fit our scheme, we allow it to be coded as “other” rather than shoehorning it into our pre-defined categorization.

Regime change event	Description
Head executive term extensions	Extension of presidential term limits is coded as regime change in HRD when this represents a clear move towards consolidating power by the sitting regime. Abolition of presidential term limits is always coded as regime change, if the sitting regime is not already a full-fledged and legislatively consolidated autocracy. They are coded with end type 2 - self-coup.
Other autocratic legislation	Legislative action such as changes to the constitution that do not concern the durability of the head executive office can also be coded regime change. This happens in instances where, e.g., severe restrictions are laid on the opposition, or one-party domination of the legislative branch is formalized. These instances are coded end type 2 - self-coup.
Suffrage extensions	Suffrage extensions are coded as regime change when they concern large shares of the population and if, and only if, the extension occurs in regimes where the formal rules correspond with the informal rules. These are coded end type 9 - guided liberalization.
Other democratizing legislation	Regime change is coded for instances such as formalization of democratic rights or promulgation of democratic institutions when these mark substantial departures from less democratic forms of government. They are coded if, and only if, they result in regimes where the formal rules correspond with the informal rules. These are coded end type 9 - guided liberalization.
Independence	When polities that have had limited autonomy transfer into independence, this is coded as regime change when the previous non-independent entity still enjoyed a good deal of autonomy and their polities worked differently than its sovereign entity. ² If the transition is made by creating a democratic constitution that is subsequently adhered to de facto, this is coded end type 9 - guided liberalization. If it does not have democratic qualities it is coded end type 10 - directed transition.
Restructuring legislative action	Legislative action by the sitting regime that is not related to outright democratization or autocratization is coded regime change when they alter the core make-up of the regime such as transitioning from a parliamentary to a presidential system, or transitioning out of transitional regimes into regimes that are no more or less democratic than the previous, e.g. after coups or civil wars. These are coded end type 10 - directed transition.
Relatively free and fair elections	Free and fair elections are coded as regime change when held in regimes where this is not the norm, and where the results of the elections are adhered to. These are coded end type 9 - guided liberalization when the elections are part of a greater development by the state to liberalize. When they are not, they are coded end type 11 - liberalization without guidance of sitting regime.
Fraudulent elections	Elections in which substantial reports of vote fraud are given, are coded as regime change when they appear in regimes which have otherwise held elections that are free and fair. Reports of vote buying do not suffice, there must also be deliberate obstructions of the right to a free vote or apparent tampering with election results. These instances are coded end type 2 - self-coup.
Wars	Inter- and intra-state wars are recorded as regime change when they efficiently either expel the sitting government or almost totally obstructs its ability to exert power. We code by emphasizing capitol rule - even when substantial areas of the country is beyond governmental control, the sitting regime continues as long as it has control over the capitol. These have their own end type 5 - civil war and 6 - inter-state war.
<i>Effective</i> coups	Describe different kinds of coups and coup settings?

Table A-4: Table of regime changing events (non-exhaustive)

F Formal and informal rule changes and regime change

In the paper, we discussed how we consider the relevance of formal and informal rules for selecting and maintaining leaders when defining regimes, and how substantial changes to both formal and informal rules – in different circumstances – may trigger regime change. For instance, a constitutional democratic regime may end through changes in its formal rules (through substantial liberalization, e.g. introduction of universal suffrage, or through non-liberalizing legislative action, e.g. changing from parliamentarism to strong versions of presidentialism), or through changes to its informal rules (e.g., substantial manipulations of elections that allow incumbents to retain office). In the paper, we also discuss some key issues pertaining to when formal rules are used for identifying the regime (when formal and informal rules correspond, broadly speaking) as well as how we may consider the identity of the actors supporting the regime as operational heuristics in cases where informal rules define the regime. In this section, we present some considerations and important rules-of-thumb that complement this discussion.

The thresholds applied for considering changes in formal or informal rules to be understood as substantial (in widely varying real-world scenarios) must, in an application concerned with *de facto* rather than *de jure* changes, inevitably be related to subjective judgements. Very reasonable arguments can certainly be made to move the threshold both in a more restrictive and in a more lenient direction, for different types of scenarios. (As mentioned, our thresholds for coding regime changes are typically lower than those applied in the most comparable extant dataset, Geddes, Wright and Frantz (2014).) However, we have applied thresholds that we, after much thinking and some revisions after trial coding of particular cases, find to be the most sensible. Discussions of the sensibility of the particular locations of thresholds aside, one clear advantage with our approach is the emphasis we have placed on internal consistency in the coding, aiming to employ similar thresholds for similar types of scenarios across countries and time, better enabling cross-country and inter-temporal comparisons.

Table A-6 clarifies the instances in which formal and informal rules are used as foundations for regime coding, listed for each category of the regime end type variable. For each of these categories, we present typical examples of situations that would be considered a substantial change in formal or informal rules, leading to the coding of regime breakdown.

End type	Informal rules emphasized	Formal rules emphasized
Military coups	Military coups are always expressions of altered informal rules for selecting leaders	None
Coups	Very often expressions of altered informal rules for selecting leaders	Can in rare instances focus on formal rules as in electoral coups
Self-coups	Self-coups are, by definition, actions driven by any given regime's incumbent to consolidate power. This can be achieved through changes to informal rules, e.g. through expulsion of coalition partners or removal of credible opposition.	Can also be achieved by changing formal rules, e.g. through constitutional changes that diminish the role of the legislature or removal of restrictions on presidential term-limits.
Assassination	Always expressions of informal rules changing as the leader must be dominant for the regime to change as a consequence of assassination	None
Natural death	Always expressions of informal rules changing as the leader must be dominant for the regime to change as a consequence of natural death. Deaths of monarchs in formal hereditary monarchies will not constitute regime change (Example: Death of Franco)	None
Civil war	Most often informal through change of leadership (If formal rules in play in combination, these will be related to subsequent developments and not to take-over of power)	In rare instances formal rules are emphasized when peace settlements or similar agreements are made
Inter-state war	Most often informal through change of leadership (If formal rules in play in combination, these will be related to subsequent developments and not to take-over of power)	In rare instances formal rules are emphasized when peace settlements or similar agreements are made
Foreign intervention	In some cases concerned with informal rules because of leadership changes	Can also be focused on formal rules i.e. through territorial concessions or the like
Popular uprising	Informal rules emphasized when the consequence of the uprising is leadership removal or step-down	Formal rules emphasized when the popular pressure has forced legislative action
Directed democratization	Concerned with informal rules if free and fair elections are held that conjoin the formal and informal rules	Concerned with formal rules when democratic institutions, a constitution or other legislative action is made
Directed transition	Concerned with informal rules only to delineate the extent to which these correspond with formal rules	Most often concerned with formal rules through incumbent regime legislative action
Non-directed democratization	By definition concerned with informal rules as the formal rules of the sitting regime cannot be changed without direction.	None

Table A-6: Table of formal/informal rules

G Clarifying and illustrating distinctions between directed transitions and self-coups

As we show in the paper, a substantial number of the regime breakdowns coded in HRD are so-called “directed transitions”. In the 14-category scheme for *v3regendtype*, we distinguish between guided transitions that are accompanied by political liberalization, on the one hand, and all other types of guided transitions. This distinction reflects the importance of elite-led processes of political liberalization historically, but also as a point of focus of theoretical models of regime change (see, e.g., O’Donnell, Schmitter and Whitehead, 1986; Acemoglu and Robinson, 2006). We provide the entire 14-category scheme for *v3regendtype* in Appendix A, but for the purpose of clarifying and distinguishing between these particular types of regime changes, here is the category wording for the two directed transition categories.

- Substantial political liberalization/democratization with some form of guidance by sitting regime leaders
- Other type of directed and intentional transformational process of the regime under the guidance of sitting regime leaders (excluding political liberalization)

Examples of guided liberalization processes include the type of processes observed, e.g., in Spain after the death of Franco, where democratic institutions were introduced (in a gradual manner) by extant regime elites, but also a number of substantial franchise extensions (often in 19th century polities) are coded as guided liberalization processes. One example is the introduction of the Reform Act in 1832 (March 15) in the United Kingdom, which marks the breakdown of what we have called the Post-Act of Settlement regime extending back to 1701.

Regarding the *other directed regime transitions*, these include different cases of intentionally guided regime changes pursued by the incumbent regime – excluding those that are related to liberalization processes. One typical case of such a directed transition is illustrated by the transformational process instigated by Charles de Gaulle in France after the Algiers crisis of 1958. Dated to January 8, 1959, when the new constitution came into force, the change led to the end of the parliamentary Fourth Republic, and the beginning of the current semi-presidential Fifth Republic. Other examples of directed transitions include the 1922 Latvian transition into a unicameral parliamentary republic under President Ulmanis, the creation of the Union of South Africa in 1910, the transition into the Pakistani Islamic Republic in 1956, as well as most transitions into partial and/or complete independence for

former colonies in Africa, Asia and Latin-America. (Exceptions are transitions where substantial uprisings, coups or civil war-like circumstances prompted the end of colonization.)

In addition to the two categories discussed above, *v3regendtype* includes a separate category for *self-coups*. In brief, a self-coup (or *autogolpe*) is a regime transformation involving the incumbent leader, resulting in a substantial consolidation of power in the hands of this leader. In other words, this regime transformation requires the intentional actions and cooperation of *at least* one key actor of the old regime, namely the chief executive (although other key regime actors are often also involved). The crucial defining feature of this category, however, and which sets it apart from the two guided transformation categories above, is that it represents a substantial concentration of power in the hands of the leader, after the change of the formal or informal rules for leader selection and maintenance has taken place. Since measuring power, and registering increased concentration of power, is inherently difficult, this means that this category is sometimes hard to differentiate from “other directed regime transitions”. Let us therefore further elaborate on and illustrate this issue:

Typical examples of self-coups occur with the passing of legislation that clearly tilts the balance of power towards the executive (typically president) and away from the legislative body. In some cases, such as the 1992 Fujimori self-coup in Peru, an event occurs that immediately restricts the choices available to the legislature or opposition in such a way that coding *v3regendtype* as self-coup stands out as a clear decision. Fujimori was assisted by the military in dissolving Congress, before having a new legislature elected and subsequently a new constitution promulgated (Levitsky, 1999). In other cases, such as the transition to Fascist rule in Italy, as discussed in the paper, coding *v3regendtype* as a guided transformation or self-coup is more readily debatable. The discussed Acerbo Law was, indeed, passed in the Senate, which based on a *de jure* approach to coding regime breakdown might indicate that the accompanying regime change did not entail a self-coup. Yet, when taking into account the strong-man tools used by the Fascist groupings, the inherent block on any opposition influence on policy that the Acerbo Law imposed, and the ultimate concentration of power in the hands of Mussolini, *v3regendtype* is coded as a self-coup.

H Polity changes and regime changes

The country-units, or more precisely polity-units – note that several colonies and other non-independent entities are also treated as separate units – used for the HRD coding, are the careful definitions laid out in V-Dem’s Country Units document. We will not go into the details on how V-Dem delineates polities and determines their time series here, but instead refer interested readers to the noted document for the general rules for defining polities as well as details on exactly which areas are counted, in any given time period, for each polity. To exemplify the latter, we provide an excerpt for a definition of one country (Romania) from the V-Dem Country Units document (p. 27):

Romania (190)

- *Coded:* 1789-
- *History:* Principality of Wallachia under Ottoman suzerainty (1789-1861); Austrian occupation (1789-1791); Russian Occupation (1807-1812); direct Ottoman rule (1821-1822); Russian occupation (1828-1834); incorporates Ottoman rayas north of the Danube (1829); Russian protectorate (1834-1854); Russian occupation (1853-1854); Austrian occupation (1854-1856); personal union with Moldavia (1859-1862); United Romanian Principalities (1862-1866); Romania (1866-1881); cedes three districts in southern Bessarabia to Russia and incorporates northern Dobruja (1878); Kingdom of Romania (1881-1947); annexes southern Dobruja (1913); occupied by Central Powers (1916); Dobruja annexed by Bulgaria (1918); Bessarabia incorporated into Romania (1918); incorporates Dobruja, Bukovina and Transylvania (1919); Soviet occupation (1944-1947); Peoples Republic of Romania (1947-1965); Socialist Republic of Romania (1965-1989); Romania (1989-).
- *Note:* Please only code Wallachia between 1789 and 1862. Between 1900 and 1918 includes only pre-World War I territory. Includes Southern Dobruja 1913-1940, Bessarabia 1918-1940 and 1941-1944. Does not include Northern Transylvania 1940-1947. Does not include territories to the East annexed during World War II.

This categorization of polities also defines the time series for which an entity is coded for all relevant V-Dem variables, including the HRD variables. This brings up the question of how to code regime changes – following our definition laid out in the paper, pertaining to

substantial changes in formal or informal rules on the selection and maintenance of political leaders – in cases where polities merge, are born, disappear, or reappear. We discuss the rules and coding practices of some prominent such cases below, and illustrate them with specific examples.

H.1 When federations/unions form and dissolve

In cases where two or more polities merge to form a single polity *or* when an existing polity dissolves, regime changes are coded in many, but not all, instances. In cases where mergers of separate polities into single countries, unions or federations occur – that is, when none of the merging or acquired polities become colonies or receive similar subordinate status – regime changes are always recorded for all polities involved, typically preceded by a regime end that is coded as a “directed transition”. Instances of such processes include the formation of the Union of Soviet Socialist Republics in 1922, the formation of the Kingdom of Serbs, Croats and Slovenes (later named the Kingdom of Yugoslavia) in 1918, and the formation of the Ethiopian - Eritrean Federation under Haile Selassie in 1952. These three instances were all results of directed transitions, even though the cooperation between the parties was substantially influenced by the uneven power balance in all three cases.

We may draw on the same polities for illustrating the coding pertaining to when countries dissolve. The dissolution of the USSR in 1991 was a seminal event, with global ripple effects. For many of the 15 now Post-Soviet states, the dissolution led to considerable societal and political upheaval. These instances are recorded as regime change for all polities involved, and the regime end type in *most of* these cases is coded as liberalization without direction from sitting regime leaders. In contrast, for the dissolution of the Ethiopian-Eritrean Federation in 1991-1993, only Eritrea, which *de facto* became a separate state in 1991, has this event recorded as regime change. Eritrea’s *de facto* independence, on May 24, came after the advances of the Tigray Peoples Liberation Front (TPLF/EPLF). This date of *de facto* independence is also registered as the date of regime change for Eritrea. But, May 1991 is a crucial month for Ethiopia as well. In fact, Ethiopia registers a regime change when Mengistu, the regime’s strong-man leader since 1974, was forced from power by the Ethiopian People’s Revolutionary Democratic Front (EPRDF). This happened on May 28th, which is the recorded date of regime change. These two situations are, of course, inherently interlinked – the fall of Mengistu’s regime, and the demise of centralized power of the incumbent regime, was linked to the successes of both the TPLF/EPLF as the EPRDF. Yet, the processes are treated as distinct in our regime coding, with different degrees of

relevance to each of the two polities, and they are thus not coded as the same regime-change event.³

While Ethiopia/Eritrea is a rather special case of a dissolving, contiguous polity in the dataset, a similar logic as that laid out above is applied for the coding of nearly all de-colonizing transitions. When a colony breaks away from its former colonizer, this is coded as a regime change in the colony but does typically not constitute a regime change event in the colonizer polity. This is because the *de facto* rules for selecting and maintaining leaders typically do not experience substantial changes in the colonizer. We turn now to a different issue of regime coding in colonies.

H.2 The relevance of colonizer polity regime changes on the colonized polity

When colonies become independent, or achieve limited, but still meaningful autonomy in some way, regime change is, as noted, only coded for the colony. Similarly, regime change is only recorded in the colonized polity when transitions take effect for the local rule of the colony. In other words, regime changes in colonizer countries are only coded as regime changes in the colonized polity if the former clearly lead to *de facto* changes in the rules of relevance in the colony. This distinction is observed for most French colonies in the 20th century, when Vichy French administrations take over during WWII. For the colonies, the dates do, however, consistently follow the specific developments in the individual countries rather than internal French developments. The French Third Republic ends with the German invasion on July 10th, 1940. In most of French West Africa, the Vichy French government is instated on the same day, but in French Indochina, the change only happens two months later on September 22nd, after Japan interferes. In extension, when the transition from the Fourth to the Fifth Republic took effect in France, this event did not – in itself – imply transitions in the French Colonies. However, most French colonies transitioned into first partial, then full, independence, over the same period. While these regime changes occurring in both France and its colonies can very well be understood as causally interlinked, the transitions in each colony are treated and coded separately.

³Note that Eritrea is coded as a separate polity in V-Dem from 1900, covering, for example, the colonial era, the federation period and the period after 1962 when it is a constituent part of Ethiopia.

I Temporal heterogeneity: Coups and uprisings

In the paper we estimated a Bayesian Change Point model on the average frequency of *all* regime breakdowns over time, responding to the question of whether there are likely “structural breaks” in the yearly stability of regimes across modern history. This exercise identified four plausible such change points, namely in 1798 (starting off the first high-frequency period, or wave, of breakdowns), 1881 (starting the first low-frequency, or crest, period), 1913 (starting second wave), and 1995 (starting second crest).

Yet, as our discussion and interpretation of descriptive statistics in the paper made abundantly clear, different modes of breakdowns have followed their own (non-linear) trends across this long time interval. For example, over the last couple of decades, we have seen a decreasing number of regime breakdowns due to coups (especially when compared to the 1960s and 70s), whereas regime breakdowns due to popular uprisings have been on the increase, at least since the late-1990s.

This notion of such different trends, reflecting that different eras may harbor structural conditions that conduce some types of regime changes but are less conducive to others, is further corroborated when we employ the same Change Point set-up to regime changes stemming (only) from particular modes of breakdown. For instance, we do not obtain similar – or even close to similar – timing of the estimated change points, when we analyze coups (by the military and by other actors, combined) and popular uprisings separately.

The results for coups are presented in Figures A-2 and A-3. Without describing or interpreting these results in too much detail, we simply note that for coups, the change point model detects two change points, namely right after 1960 and right after 1980. These years mark the start and end points of a clear uptick in the frequency of coup-induced transitions globally. As noted in the paper, the 1960s and 70s experienced a large number of coups, globally, and particularly in recently de-colonized states in Sub-Saharan Africa. (We here remind that these polities are typically coded back to 1900, or even further back, as colonies for HRD, and are thus also included in the sample prior to 1960). As we also discuss in the paper, recent work on coups, drawing on post-1960 data, have highlighted the declining trend for coups over the last few decades. What is less appreciated, however, is that the post-1960s period also marked a clear break with previous decades when it comes to coup frequency.

Interestingly, when we run our baseline model employed in the paper on coup-breakdowns for the split samples demarcated by the change point (see Table A-7), an intermediate level of democracy is clearly related to higher coup frequency for all time periods. For the economic

determinants, however, there are stronger indications of temporal heterogeneity. Notably, neither income level nor short-term growth were related to coups during the long 1789–1962 period. In contrast, we find that poorer countries were systematically more likely to experience coup breakdowns during the “coup wave” from 1962–1981, whereas during the low-frequency period after 1981 experiencing low short-term growth is clearly associated with increased risk of coup breakdown. These differences should direct our attention to structural factors and omitted variables that trend over time but are not included in the baseline model.

The change point model produces quite different results when we zoom in on regime breakdowns due to popular uprisings. While such breakdowns, overall, are less frequent than coup breakdowns, they have experienced some dramatic historical spikes over very limited time intervals, one such spike coming around 1848/9 and another during and right after WWI (see Figure A-4). Right around these spikes, the change point model is unable to yield strong predictions (as captured by the posterior probability densities) about which “state of the world” obtains, when it comes to the risk uprising-induced regime death (see Figure A-5). The model does, however, clearly predict that the pre-1848 state was differently from the state in, say, 1855, and likewise when comparing the years prior to WWI with, say, 1925.

Interestingly, the baseline model run on split samples, reported in Table A-8, provides suggestive evidence that the determinants of popular uprisings may have differed across the different “states” of modern history. Income level is significantly associated with breakdowns due to popular uprisings in the period spanning the two French revolutions of 1789 and 1848, but also during time period from 1917–2014. Note, however, that a higher level of income is *positively* associated with the outcome in the first period and *negatively* associated in the last period. Hence, while richer countries were more likely to experience regime deaths due to popular uprisings in the early part of modern history, poor countries are more likely to experience such regime breakdowns after WWI. In this latter period, low short-term economic growth is also associated with regime death due to uprisings, in contrast with the insignificant relationships observed in prior periods.

J Robustness tests

This section contains two types of robustness tests. First, it reports analyses of regime breakdown, using the benchmark specification, on sub-samples distinguished by regime type. In order to divide the sample up into democracies and autocracies, we dichotomize the four-fold categorization by the V-Dem Regimes of the World (RoW) measure, so that “Electoral Democracies” and “Liberal Democracies” are counted as democracies and “Electoral autocracies” and “Closed autocracies” are counted as dictatorships. Thereafter, we present analyses – both on regime breakdown and on the four modes of breakdown analyzed also in the main paper – drawing on an alternative data source (The Maddison Project) for the GDP and population measures, accompanied by a short discussion on robustness of the different covariates.

J.1 Regime breakdown models for sub-samples of democracies and dictatorships

J.2 Regime breakdown models using alternative data sources for measuring GDP and population

As noted in the main text, we re-estimate our core models using measures of GDP (levels and growth) and population that are drawn from a different data source than the one used for our main analysis. We discussed in the paper how our main analysis rely on the GDP per capita estimates from Fariss et al. (2017), benchmarked in the long Maddison time series. These data offer extensive coverage and may mitigate various forms of measurement error, but also have a large number of imputed observations. Thus, we here assess sensitivity to using the original time series from the Maddison project (Bolt and van Zanden, 2000). Both the population and GDP data are curated from V-Dem version 9, and we interpolate the GDP data by assuming constant growth rates in the time period between observations (this is especially relevant for the 19th century, where GDP observations are often reported with longer intervals, often 10 years).

Table A-10 re-runs our benchmark specifications on regime breakdown from Table 3 in the paper, but now using the \ln GDP p.c., GDP p.c. growth and \ln population measures from the Maddison project. First, we highlight that the number of observations for the model in Table A-10 in these regressions are lower than for the regressions reported in Table 3 of the paper. The reason is simply that the Fariss et al. data allow us to include several additional imputed observations, both for additional countries and (especially) for the early years of the time series (i.e., between 1789 and 1820). Second, however, when comparing the results in Table A-10 with the benchmark regressions, it turns out that we get fairly similar findings – both in terms of point estimates and t-values – for GDP levels and for GDP growth when using our alternative measure. Yet, we note that results are somewhat weaker when run on the Geddes et al. measure of regime change (Model 1) and somewhat stronger for GDP p.c. growth for some specifications that use the HRD data. The results for population also remain fairly similar when using the Maddison data as compared to the main results reported in the article, with the coefficients on population being indistinguishable from zero.

Table A-11 replicates the table where we disaggregate between different types of regime breakdown (coups, wars, uprisings, guided liberalizations). Once again, these tests show fairly similar patterns as for our benchmark regressions on breakdown types using the Fariss et al. data, reported in Table 4. Yet, we note that results are sometimes weakened in terms of statistical significance. This goes, for example, for GDP per capita growth when regime breakdown due to, respectively, coups or uprisings is the dependent variable. These reductions in t-values do, however, occur despite an increase in the absolute size of the

Table A-10: Logit models on the risk of regime breakdown, alternative measures of GDP and population

	(1.1)	(1.2)	(1.3)	(1.4)
	GWF (1946–2013)	HRD (1946–2013)	HRD (1820–2014)	HRD (1820–2014)

coefficient for GDP per capita growth in both regressions. The point estimates thus suggest that high short-term growth is even more strongly related to lower risk of breakdown when using the Maddison project data. However, the standard errors increase quite a lot. The fact that we get some increase in standard errors for some of the specifications is unsurprising, since these measures of GDP (and population) imply a greatly reduced sample, and the interpolation assuming constant growth rates in longer time intervals without data might also yield attenuation bias. Yet, while we put somewhat more confidence in the results reported in the paper, these robustness tests give us a note of caution when it comes to drawing very firm conclusions on the role of income growth and income level in affecting particular modes of breakdown. That being said, the fact that the coefficients do not change radically when altering the data source for measuring GDP could, in fact, also be interpreted as lending additional confidence to our benchmark results.
